Here's the modeling for air plume from IMAAC.

Pay close attention to the assumptions. Often this particular organization is not well linked into specifics of what is going on at the site.

I didn't have TCEQ emails

Subject: 730PM IMAAC Forecast

Good Evening!

Attached is the latest IMAAC forecast for the Deer Park area.

Please note the numerous assumptions included in the first couple slides. As of this time, we understand air monitors are all above acceptable levels. This would be for situational awareness only should there be future issues tonight.

Also, note the 12-hour AEGL forecasts assumes one were to sit in the same spot outdoors for 12 hours.

Please do not forward this email to the public or media.

Thanks,

Scott Overpeck & Sean Luchs
